Exclusively on the Cardano Blockchain

[www.ada-sammy.io](http://www.ada-sammy.io)

## Introduction

Samoyed Token (\$SAMMY) was created as a memecoin on the Cardano network. We believe Cardano is the perfect environment for white doggos to exist.

## Why hodl \$SAMMY?

To be a Sammy Billionaire is a good enough reason. Why else? Accumulating Sammy is a great choice.

## Technicals for Faucet

Your pull rate of \$SAMMY depends entirely on a mathematical calculation even the smartest of Sammys had trouble formulating. After every halving of remaining supply, the returns will also be halved for the faucet.

## Tokenomics

We have decided to initially mint 500,000,000,000,000 tokens. 50% of these tokens are going to be locked and held for future consideration. 10% go towards the team / used for possible SPO. The remaining 40% will be for community. Your drop rate for \$SAMMY is located on <https://ada-sammy.io>.

Every transaction for \$SAMMY has the chance to unlock a Black / Golden \$SAMMY NFT. Total supply of Black / Golden Sammys is 500 / 50 accordingly. What they lack in creativity on the outside, they gained on the inside. More information regarding this will be revealed later. However, we have one event planned shortly after launch, '*Hunt for the Golden Sammy*.'

Fur-sure, Hodlers of these black and golden \$SAMMY NFTs will have exclusive benefits in the future.

### **To-Be-Determined**

There are many things of uncertainty, howl-ever we know that we at \$SAMMY have many interesting ideas for Sammys. We will talk future partnerships with other coins and NFT drops to Black and Golden \$SAMMY hodlers. And even if you do not acquire these NFTs, \$SAMMY is what may be required to participate in our SAMMYDROP nfts coming Q1 2022.

Also, woofs of a SAMMYSTAKE.

### **Available at Launch**

20% of the circulating supply will be available through the Sammy Playground which is our token faucet available on ada-sammy.io
